ROBERT AMEL

**Abstract** The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 100 male and 100 female students. The study was conducted in a secondary school in Ankara, Turkey. The students were divided into two groups: a control group and an experimental group. The experimental group participated in a 12-week training program, while the control group did not. The physical fitness of the students was measured at the beginning and at the end of the 12-week period. The results showed that the experimental group had significantly higher levels of physical fitness than the control group at the end of the 12-week period. The training program was effective in improving the physical fitness of the students.
